Write a java program to demonstrate operator precedence and associativity

Aim:

Date: 2023-09-14

ID: 224G1A0510 Page No: 1

Source Code:

```
OperatorPrecedence.java
import java.util.Scanner;
class OperatorPrecedence
        public static void main(String args[])
                int x,result;
               Scanner sc = new Scanner(System.in);
               System.out.print("Enter a num: ");
               x=sc.nextInt();
               System.out.println("The operation going is x++ + x++ * --x / x++ --
-x + 3 >> 1 | 2");
               result=x++ + x++ * --x / x++ - --x + 3 >> 1 | 2;
                System.out.println("result = "+result);
        }
}
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Enter a num:
The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 \mid 2
result = 3
```

```
Test Case - 2
User Output
Enter a num:
The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 \mid 2
result = 2
```

Aim:

write a java program that uses if-else control statement and print the result Source Code:

```
Control.java
import java.util.Scanner;
class Control
```

```
public static void main(String args[])
        int x,y,sum;
        Scanner sc = new Scanner(System.in);
        System.out.print("Enter first num : ");
        x=sc.nextInt();
       System.out.print("Enter second num : ");
       y=sc.nextInt();
        sum=x+y;
       if(sum==20)
               System.out.println("x + y is equal to 20");
        else if(sum<20)
               System.out.println("x + y is less than 20");
       else
               System.out.println("x + y is greater than 20");
}
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Enter first num :
Enter second num :
x + y is less than 20
```

```
Test Case - 2
User Output
Enter first num :
Enter second num :
10
x + y is greater than 20
```

ID: 224G1A0510 Page No: 2

Exp. Name: Sample Program to demonstrate S.No: 3 Date: 2023-10-06 constructor

Aim:

Write a program to demonstrate constructor class

Source Code:

```
Student.java
class Student
        int num;
        String name;
        void display()
                System.out.println(num+" "+name);
        public static void main(String args[])
                Student s1 = new Student();
                Student s2 = new Student();
                s1.display();
                s2.display();
        }
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
0 null
0 null
```

ID: 224G1A0510 Page No: 3

Exp. Name: Sample program to demonstrate S.No: 4 destructor

Date: 2023-10-06

Aim:

Write a program to demonstrate destructor class

Source Code:

```
DestructorExample.java
class DestructorExample
        public static void main(String args[])
               DestructorExample de=new DestructorExample();
                de.finalize();
                de = null;
               System.gc();
               System.out.println("Inside the main() method");
        public void finalize()
                System.out.println("Object is destroyed by the Garbage Collector");
```

Execution Results - All test cases have succeeded!

Test Case - 1 **User Output** Object is destroyed by the Garbage Collector Inside the main() method Object is destroyed by the Garbage Collector

S.No: 11	Fig. Name: A program to illustrate inheritance	Date: 2023-10-11
3.NO-11	Exp. Name: A program to illustrate Inheritance	Date: 2023-10-11

Aim:

Write Java program on use of Inheritance.

Create a classVehicle

- contains the data members **color** of String type and **speed** and **size** of integer data type.
- write a methodsetVehicleAttributes() to initialize the data members

Create another classCarwhich is derived from the classVehicle

- contains the data members ccandgears of integer data type
- write a methodsetCarAttributes() to initialize the data members
- write a methoddisplayCarAttributes() which will display all the attributes.

Write another class InheritanceDemo with main() it receives five arguments color, speed, size, cc and gears.

Source Code:

InheritanceDemo.java

ID: 224G1A0510 Page No: 16

```
Srinivasa Ramanujan Institute of Technology 2022-2026-CSE-A
```

```
Execution Results - All test cases have succeeded!
```

c.setVehicleAttributes(args[0],Integer.parseInt(args[1]),Integer.parseInt(args[2]));

c.setCarAttributes(Integer.parseInt(args[3]),Integer.parseInt(args[4]));

class Vehicle

String color; int speed,size;

class Car extends Vehicle

}

class InheritanceDemo

}

int cc,gears;

cc=c; gears=ge;

color=col; speed=sp; size=si;

public void setCarAttributes(int c,int ge)

public void displayCarAttributes()

public static void main(String args[])

c.displayCarAttributes();

Car c = new Car();

public void setVehicleAttributes(String col,int sp,int si)

System.out.println("Color of Car : "+color);

System.out.println("Speed of Car : "+speed); System.out.println("Size of Car : "+size); System.out.println("CC of Car : "+cc);

System.out.println("No of gears of Car : "+gears);

{

}

}

}

Test Case - 1	
User Output	
Color of Car : Blue	
Speed of Car : 100	
Size of Car : 20	
CC of Car : 1000	
No of gears of Car : 5	

User Output
Color of Car : Orange
Speed of Car : 120
Size of Car : 25
CC of Car : 900
No of gears of Car : 5

Exp. Name: write a java program to prevent inheritance using abstract class.

Date: 2023-10-11

Aim:

S.No: 12

write a java program to prevent inheritance using abstract class.

- Create an abstract class Shape
- Create a class Rectangle which extends the class Shape
- Class Rectangle contains a method draw which prints drawing rectangle
- Create another class circle1 which extends Shape
- Class circle1 contains a method draw whcih prints drawing circle
- Create a main class TestAbstraction1
- Create object for the class circle1 and called the method draw

Source Code:

```
TestAbstraction1.java
abstract class Shape
        abstract void draw();
}
class Rectangle extends Shape
        public void draw()
                System.out.println("drawing rectangle");
class Circle1 extends Shape
        public void draw()
                System.out.println("drawing circle");
class TestAbstraction1
        public static void main(String args[])
                Circle1 cir = new Circle1();
                cir.draw();
}
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
drawing circle
```

    }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1

User Output

Bike is running safely

ID: 224G1A0510 Page No: 22

Aim:

Write a Java program that implements an interface.

Interface

Create an interface called (Car) with two abstract methods (String getName()) and (int getMaxSpeed()). Also declare one **default** method void applyBreak() which has the code snippet

Exp. Name: Write a Java program to implement

```
System.out.println("Applying break on " + getName());
```

In the same interface include a static method (Car getFastestCar(Car car1, Car car2)), which returns car1 if the maxSpeed of car1 is greater than or equal to that of car2, else should return car2.

Create a class called BWW which implements the interface Car and provides the implementation for the abstract methods getName() and getMaxSpeed() (make sure to declare the appropriate fields to store name and maxSpeed and also the constructor to initialize them).

Similarly, create a class called Audi which implements the interface Car and provides the implementation for the abstract methods getName() and getMaxSpeed() (make sure to declare the appropriate fields to store name and maxSpeed and also the constructor to initialize them).

Create a **public** class called MainApp with the **main()** method.

Take the input from the command line arguments. Create objects for the classes [BMW] and [Audi] then print the fastest car.

Note:

Java 8 introduced a new feature called default methods or defender methods, which allow developers to add new methods to the interfaces without breaking the existing implementation of these interface. These default methods can also be overridden in the implementing classes or made abstract in the extending interfaces. If they are not overridden, their implementation will be shared by all the implementing classes or sub interfaces.

Below is the syntax for declaring a default method in an interface:

```
public default void methodName() {
    System.out.println("This is a default method in interface");
}
```

Similarly, Java 8 also introduced static methods inside interfaces, which act as regular static methods in classes. These allow developers group the utility functions along with the interfaces instead of defining them in a separate helper class.

Below is the syntax for declaring a static method in an interface :

```
public static void methodName() {
    System.out.println("This is a static method in interface");
```

S.No: 24 Exp. Name: program to create a super class called Figure that it returns the area of a rectangle and triangle

Date: 2023-11-05

Aim:

Write a java program to create a super class called Figure that receives the dimensions of two dimensional objects. It also defines a method called area that computes the area of an object. The program derives two sub-classes from Figure. The first is Rectangle and second is Triangle. Each of the sub classes override area() so that it returns the area of a rectangle and triangle respectively

Source Code:

```
AbstractAreas.java
import java.util.Scanner;
abstract class Figure{
        double dim1;
        double dim2;
        abstract void area();
class Rectangle extends Figure{
        public void area(){
                System.out.println("Rectangle:");
                System.out.println("Area is "+(dim1*dim2));
class Triangle extends Figure{
        public void area(){
                System.out.println("Triangle:");
                System.out.println("Area is "+(0.5*dim1*dim2));
}
class AbstractAreas{
        public static void main(String args[]){
                Rectangle r1 = new Rectangle();
                Triangle t1 = new Triangle();
                Scanner sc = new Scanner(System.in);
                System.out.println("Enter lenght and breadth of Rectangle :");
                r1.dim1=sc.nextInt();
                r1.dim2=sc.nextInt();
                System.out.println("Enter height and side of Triangle :");
                t1.dim1=sc.nextInt();
                t1.dim2=sc.nextInt();
                r1.area();
                t1.area();
        }
```

Execution Results - All test cases have succeeded!

```
Test Case - 1

User Output

Enter lenght and breadth of Rectangle :
```

ID: 224G1A0510 Page No: 40

2022-2026-CSE-A

Srinivasa Ramanujan Institute of Technology 202

12	
14	
Enter height and side of Triangle :	
7	
5	
Rectangle:	
Area is 168.0	
Triangle:	
Area is 17.5	

Test Case - 2		
User Output		
Enter lenght and breadth of Rectangle :		
4		
8		
Enter height and side of Triangle :		
5		
3		
Rectangle:		
Area is 32.0		
Triangle:		
Area is 7.5		

Aim:

Write a Java program that uses three threads to perform the below actions:

- 1. First thread should print "Good morning" for every 1 second for 2 times
- 2. Second thread should print "Hello" for every 1 seconds for 2 times
- 3. Third thread should print "Welcome" for every 3 seconds for 1 times

Write appropriate **constructor** in the <u>Printer</u> class which implements <u>Runnable</u> interface to take three arguments: <u>message</u>, <u>delay</u> and <u>count</u> of types <u>String</u>, <u>int</u> and <u>int</u> respectively.

Write code in the Printer.run() method to print the message with appropriate delay and for number of times mentioned in count.

Write a class called ThreadDemo with the main() method which instantiates and executes three instances of the above mentioned Printer class as threads to produce the desired output.

[Note: If you want to sleep for 2 seconds you should call (Thread.sleep(2000);) as the (Thread.sleep(...)) method takes milliseconds as argument.]

Note: Please don't change the package name.

Source Code:

q11349/ThreadDemo.java

ID: 224G1A0510 Page No: 42

```
package q11349;
public class ThreadDemo {
        public static void main(String[] args) throws Exception {
                Thread t1 = new Thread(new Printer("Good morning", 1, 2));
                Thread t2 = new Thread(new Printer("Hello", 1, 2));
                Thread t3 = new Thread(new Printer("Welcome", 3, 1));
                t1.start();
                t2.start();
                t3.start();
                t1.join();
                t2.join();
                t3.join();
                System.out.println("All the three threads t1, t2 and t3 have
completed execution.");
   }
}
class Printer implements Runnable {
        public String name;
        public int rep;
        public int delay;
        public Printer(String name,int delay,int rep){
                this.name=name;
                this.delay=delay;
                this.rep=rep;
        public void run(){
                for(int i=0;i<rep;i++){</pre>
                        System.out.println(name);
                                Thread.sleep(delay*1000);
                        }catch(Exception e){
                                e.printStackTrace();
                        }
                }
        }
```

Execution Results - All test cases have succeeded!

Test Case - 1	
User Output	
Good morning	
Hello	
Welcome	
Good morning	
Hello	
All the three threads t1, t2 and t3 have completed execution.	

S.No: 26

Aim:

Write a java program to find and replace patterns in a given file. Replace the string "This is test string 20000" with the input string.

Note: Please don't change the package name.

New string

Previous string: This is test string 20000. The test string is replaced with your input string, check the string you entered is now visible here.

New String: New string. The test string is replaced with your input string, check the string you entered is now visible here.

S.No: 27 Exp. Name: *A java program to demonstrate that*the catch block for type Exception A catches the exception of type Exception B and Exception C.

Date: 2023-11-05

Aim:

Use inheritance to create an exception superclass called Exception A and exception subclasses Exception B and Exception C, where Exception B inherits from Exception A and Exception C inherits from Exception B. Write a java program to demonstrate that the catch block for type Exception A catches the exception of type Exception B and Exception C.

Note: Please don't change the package name.

```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
No.Of Mapping Elements in HashTable:
3
Rank:
4
Name:
Robert
Rank:
5
Name:
John
Rank:
6
Name:
Jennifer

Rank : 5	Name : John	
Rank : 4	Name : Robert	

Test Case - 2
User Output
No.Of Mapping Elements in HashTable:
3
Rank:
1
Name:
Jon
Rank:
2
Name:
Robert
Rank:
3
Name:
Jennifer
Rank : 3 Name : Jennifer
Rank : 2 Name : Robert
Rank: 1 Name: Jon
